

MTH 1125 (2 pm - Pod B) Test #3

FALL 2020

Pat Rossi

Name _____

Instructions. Show CLEARLY how you arrive at your answers.

1. $f(x) = x^3 + 3x^2 + 2$ Determine the intervals on which $f(x)$ is increasing/decreasing and identify all relative maximums and minimums. (Caution - there are **two** critical numbers. Make sure you get them both!)

2. $f(x) = x^4 + 8x^3 - 30x^2 + 6x + 3$ Determine the intervals on which $f(x)$ is Concave up/Concave down and identify all points of inflection.

3. $f(x) = 2x^3 + 15x^2 - 84x + 3$ on the interval $[-2, 3]$. Find the Absolute Maximum and Absolute Minimum values (if they exist).

4. $f(x) = \frac{1}{7}x^{\frac{14}{5}} - 2x^{\frac{4}{5}} + 1$ Determine the intervals on which $f(x)$ is increasing/decreasing and identify all relative maximums and minimums.

5. A rectangle is inscribed in the region bounded by the positive x -axis, the positive y -axis, and the graph of $f(x) = (x - 5)^4$ as shown below. Determine the value of x that makes the area of the rectangle as large as possible.

When you get the Area function $A(x)$, **do not simplify** before computing $A'(x)$. When finding the critical numbers, **compute $A'(x)$ without simplifying $A(x)$**
